

## 2017 TSW Water Levels Summary

At the end of December 2017, the TSW reset its online water levels charts. In order to have a record of the 2017 water levels for all the reservoir and canal lakes CEWF is making available screen shots from the TSW site as of the end of December 2017. These include both the actual level water measurements as well as the historic extremes. The summary charts are organized by sub-watershed and appear in the same order as on the TSW site (from west to east). They may be viewed by clicking below (see also under 'TSW Water Levels').
