

## **2018 TSW Water Levels Summary**

*At the end of December, the TSW resets its online water levels charts. In order to have a record of the 2018 water levels for all the reservoir and canal lakes CEWF is making available screen shots from the TSW site as of the end of December 2018. These include the actual 2018 water level data as well as the multi-year average and historic extremes. The summary charts are organized alphabetically within each sub-watershed as per the Key Map. They may be viewed by clicking the links below (see also under 'TSW Water Levels' on right hand side of the CEWF website homepage).*
